**WhisperMat-HW**  
for hardwood

**WhisperMat-CS**  
for ceramic & stone

**PCBC Booth #6130**

**AIA Booth #2679**

WhisperMat-CS and WhisperMat-HW reduce impact and airborne sound transmissions, and isolate finished flooring from subfloor cracks. These peel & stick sheet membranes are constructed of a Cross-Linked Poly-Olefin foam sheet combined with an aggressive rubberized adhesive. WhisperMat-HW Plus stops subfloor moisture emissions from curling or warping wood floors.

WhisperMat-CS also has the flexibility and strength to withstand structural movement and concrete shrinkage cracks up to 1/4" without transferring stress load to the finished tile. WhisperMat provides excellent chemical and moisture resistant properties as well as sound absorption, making this an excellent system to enhance flooring installation performance.
